VARUN MURUGAN P

GTM Engineer | Revenue Systems & Workflow Automation | AI-Powered RevOps

+91-9384519145 | varunmurugan3108@gmail.com | linkedin.com/in/varunmuruganp | varunmurugan-gtm.vercel.app

SUMMARY

GTM Engineer with 14+ months building revenue-automation systems for early-stage B2B startups across Romania, Singapore, and the US. Shipped production n8n/OpenAI pipelines spanning lead enrichment and scoring, CRM automation, and AI-assisted candidate screening — reducing lead response time from 4 hours to under 3 minutes and saving clients an estimated 6–28 hours of manual work per week per engagement. Core stack: n8n, Make, Python, HubSpot, Clay, OpenAI/Claude, LangChain.

CORE STACK

Automation & Workflow: n8n, Make (Integromat), Zapier, Pipedream, Pabbly Connect

CRM & GTM Systems: Clay, HubSpot, Salesforce, REST APIs, Webhooks, OAuth, lead routing & scoring architecture

AI / LLM Integration: OpenAI GPT-4, Claude API (Anthropic), LangChain, LangGraph, RAG, prompt engineering

Data & Programming: Python (scripting, API/data pipelines), SQL, JSON schema design, vector databases, Google Sheets

Dev Tools: Cursor, GitHub Copilot, Vercel, Slack, Gmail, Google Workspace, Airtable, Beehiiv

CLIENT IMPACT — SELECTED SYSTEMS

Lead Response & CRM Automation *Client Engagement — Romania*

- Reduced lead response time from 4 hours to under 3 minutes via a webhook-driven workflow that enriches incoming leads with Clay, classifies intent with OpenAI, validates data through JSON schemas, and syncs qualified records to HubSpot.
- Saved approximately 28 hours of manual work per week and increased routing accuracy by replacing manual review and routing with the automated pipeline.

AI-Assisted Candidate Screening & Hiring Pipeline *Client Engagement — US (name withheld by client request)*

- Built an n8n + OpenAI hiring pipeline that scores candidates against a weighted scorecard across resume, initial HR screening, and technical-interview stages, producing explainable recommendations while keeping human approval required before any candidate advances.
- Estimated: reduced resume review time from ~10 minutes to ~2 minutes per candidate, saving an estimated ~8 hours per 60-candidate hiring cycle (portfolio project; not measured in production).

AI Newsletter Operations *Client Engagement — Ivanna, Singapore*

- Built an automated publishing pipeline that aggregates content, applies AI-powered brand-voice refinement, generates newsletter drafts, and schedules distribution across channels.
- Reduced newsletter preparation time from several hours to under 30 minutes, freeing approximately 6 hours of editorial capacity per week.

Outbound GTM Audit *Strategic GTM Case Study*

- Produced a comprehensive GTM audit evaluating ICP definition, buying signals, lead sourcing, CRM health, and automation opportunities for a modern SaaS outbound engine.
- Delivered a strategic roadmap and prioritized automation recommendations to improve prioritization and reduce manual work at scale.

AI-Powered GTM Intelligence Hub *Personal Project*

- Self-initiated build (n8n + OpenAI) that continuously monitors buying signals — funding announcements, leadership hires, product launches, hiring activity — enriches company and contact data, scores opportunities with AI, and routes high-priority accounts into outbound workflows.

EDUCATION

B.Sc. Aeronautical Science — Gold Medallist *Aug 2022 – May 2025*

- VELS University, Chennai | First Class with Distinction (GPA 4.0) | Gold Medal for Academic Excellence
- Aeronautical Science training instilled a systems-reliability mindset carried directly into GTM engineering: workflows are designed with 2–3 fallback paths for critical failure points, not a single happy-path route — the same failsafe thinking behind flight-critical redundancy shapes error handling and strategic planning in automation pipelines.
